MEMORANDUM

DATE: December 18, 2000

TO: Dorothy Sperry

FROM: Leon Lahiere, R.G. 

RE: UIC Registration - Marine Terminals
Nearby Drinking Water Wells
J-5574-01

Anchorage

Boston

Chicago

Hart Crowser has reviewed available data, including the water well reports obtained from the Oregon Water Resources Division (WRD) web site, to identify potential domestic or municipal water wells nearest to the drywells located at Terminal 1, Terminal 4/Pier 1, and Terminal 6. The locations of the wells relative to the drywell locations are shown on the attached figures.

Denver

Terminal 1. No drinking water wells were identified within a two-mile radius of Terminal 1.

Fairbanks

Terminal 4/Pier 1. The attached figure of Terminal 4 and the surrounding area shows the nearest potential drinking water well, located about 3,200 feet east of the drywells. This well was completed in 1944 and was used for drinking and industrial purposes until water from the city water supply system became available. We recently conducted a land and water use survey as part of the T-4 Upland RI. The results of the survey indicate that water from this well is now used only for industrial (i.e., cooling) purposes. No other drinking water wells were identified within a two-mile radius of the drywells.

Jersey City

Juneau

Terminal 6. The nearest potential drinking water well is about 10,000 feet southwest of the drywell location at Terminal 6, on the opposite side of the Columbia Slough. This well was completed in 1944 and was used for drinking and industrial purposes until water from the city water supply system became available. We recently conducted a land and water use survey as part of the T-4 Upland RI. The results of the survey indicate that water from this well is now used only for industrial (i.e., cooling) purposes. No other drinking water wells were identified within a two-mile radius of the drywell.
